

IPERBLOCK®

“ LIME BASED ” the most up-to date technology
in the field of aerated autoclaved blocks

IPERBLOCK - blocks, tapped or smooth, to build thermal coats, partitions, dividing walls, curtain walls, bearing walls with exceptional technical performances that allow extraordinary savings in time and cost of construction.

IPERTERM - to use as acoustic insulation in dry or mixed insulating substrates; it allows to build substrates of high quality with the reduction of approximately 50 % of the consumption of cement compared to the use of expanded clay.

KOLLBLOCK - white premixed adhesive, bio-ecological and biocompatible, to build walls, partitions, curtain walls, suitable as preparation product, as filler to finish the traces of the installations. Indoor / outdoor use.

RASOBLOCK - white premixed plaster, bio-ecological and biocompatible, to finish the walls, partitions, curtain walls. To trim interior and exterior plaster, old and new, traditional or pre-mixed. Indoor / outdoor use.

*From nature
and technology,
building solutions
for life's quality*

IPERBLOCK® lime based is made of natural sand, favours the use of lime, reduces the use of cement, eliminates gypsum completely. The main components (sand, lime, cement, water, aluminium powder), finely grinded, are homogeneously mixed and poured into special moulds. The rising phase occurs naturally and generates the cellular structure: into the solid frame are multiple small alveolus. In autoclave, the steam hardening phase accelerates and completes mineralization processes of L.A.A.C. which becomes permanently a "natural stone".

This process is completely natural, bio-ecological and environmentally friendly.

IPERBLOCK® does not contain any harmful substance for health or environment.

IPERBLOCK® employs only 35 % of energy normally used by traditional building materials and reduces the produced CO2 more than 75%.
